

PROJECT: *Smart Solutions for Railways*

Team id: PNT2022TMID37863

Team Lead: SRI HARIHARAN S

Team Members: JAYESH M S
SATHYA NARAYANAN P

PROBLEM:

In the day to day life, **people** sometimes **miss out their train** due to delay. In some cases, people, even though they arrive at railway station, **due to large queue** people cannot get their tickets on time so that in some cases **passengers miss their train**. Our project is created to come out of such critical situations

SOLUTION:

Our project is all about dealing the Train travel through website where people can **book their tickets, and can get any information of various trains** anywhere at any time

- As like as offline booking. There is **no huge process**.
- Passengers can book both Their To and return tickets
- After the successful booking of tickets, they will be provided with a **QR code**, to which the TTR can scan and know the required details
- Additional features are, the passengers can **track their train** like train's current location, arrival time, etc.,

CONCLUSION:

This website is a **user-friendly** and this website will **not ask** for **extra money** to book tickets. This website is **confidential one**, that no information about the passengers will be leaked out.
